

ETHAFOAM

SOLID CLOSED CELL EXPANDED POLYETHYLENE BAR AND CORD

KEY BENEFITS SUMMARY

- Expanded polyethylene cord and bar.
- Ideal for all types of joints.
- Use in different industrial sectors.

PRODUCT INFORMATION

DESCRIPTION

ETHAFOAM is a product developed and manufactured as a solid closed cell expanded polyethylene, together with its cylindric shape, gives to ETHAFOAM, the properties required for its destined use and applications (expansion joint, depth limiting, a perfect support for sealants)...

USAGE / PURPOSE

ETHAFOAM complies with the technical specifications required by Paragraf 2-3 of the DIN 18540 standard referring materials for sealing joints.

TECHNICAL INFORMATION

The filling material must ensure an uniform limitation of the depth of the joint, it should not absorb water or prevent the deformation of the putty.

It should contain no substance that impedes adherence of the putty (tar, oil, etc). and it must provide sufficient resistance to enable the putty to be placed and insulated.

CHARACTERISTICS

GLAZING

In glazing, solid ETHAFOAM, bar is placed in frames, windows, doors, etc...

PUBLIC WORKS

Water-tight joints in buildings, water-tight joints in dam walls, water-tight joints in water reservoirs in general.

ETHAFOAM

**CIVIL WORK**

r
